**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to an audio signal processing system, classified in class 704, subclass 271.
- II. Claims 21-23, drawn to a speech enhancement system, classified in class 704, subclass 270.
- III. Claims 24-25 and 42-44, drawn to a speech enhancement system implementing speech recognition, classified in class 704, subclass 231.
- IV. Claims 26-27 and 45-47, drawn to a speech enhancement system implementing lip reading, classified in class 704, subclass 270.
- V. Claims 28-41, drawn to a speech enhancement methods, classified in class 704, subclass 270.
- VI. Claim 48, drawn to an audio signal processing method, classified in class 704, subclass 271.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as signal

Art Unit: 2654

enhancement in various audio environments not requiring visual inputs. Invention III has separate utility such as signal enhancement in a speech recognition system or environment. Invention IV has separate utility such as signal enhancement in an audiovisual environment. Invention V has separate utility such as noise suppression. See MPEP § 806.05(d).

Inventions I, II, III, IV, V and VI are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claim 48 is an evidence claim that the combination does not require the particulars of the subcombinations. The subcombination has separate utility such as those indicated above.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Douglas Rudy on July 9, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 2654

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
